From here, you get an expanded view of your medications.

You can also see your deleted medications (which can also be added to your prescription [with a warning]).

Clicking the upper right corner returns you to the small view.

You can add /edit / delete medications just as before in the smaller view.

When you delete a med, you need to provide a reason.

If it is an allergy, it should auto add to the allergy panel.

When you add a medication, it should also check against the patients allergies.
